1. Theory

1.1. Strongly Correlated Systems

1.1.1. Exercise 1

(a) Let $a_i^\dagger$ be the creation operator on orbital i and a_i the annhilation operator. The canonical anticommutation relations are

$$\{a_i,\, a_j\} = \{a_i^\dagger,\, a_j^\dagger\} = 0 \tag{1.1}$$

$$\{a_i,\, a_j^\dagger\} = \delta_{i,\,j}\mathbb{1}. \tag{1.2}$$

(b) One transformation is

$$c_{i,0} = a_i + a_i^\dagger \tag{1.3}$$

$$c_{i,1} = \mathrm{i}(a_i - a_i^\dagger), \tag{1.4}$$

where i is the orbital index.

(c) Majorana fermions satisfy the following anticommutation relation

$$\{c_{i,\alpha}c_{i,\beta}\} = \delta_{i,j}\delta_{\alpha,\beta}\mathbb{1}. \tag{1.5}$$

2. Project

More text . . . Here I cite [1]

A. First appendix

Lots of cool stuff about being structured.

Todo list
